Features ? : 10

Bought new in October 2003. 8 ohm version. Made in Germany. 4x10" bass speaker with Fostex tweeter. 800 W rms. Drivers made exclusively for Glockenklang by Volt. 2 neutrik speakon inputs. You can also find an attenuator knob on the metal back panel. Durable black epoxy finish. Plastic stack corner. Dimension in mm : 64x59.5x43.5 37 kg. Vibration-free steel grill. 2 side handle well spotted. The look of Glockenklang products is always very classic and even sometimes not very attractive but the best is inside !

Sound Quality ? : 10

To words are simply needed to describe it : pure and transparent. This speaker will absolutely not colour your sound so it is useless to try to hide a crappy bass behind it. I use it with a Glockenklang Soul bass head reviewed here too and a Warwick streamer jazzman 5 and the sound is simply fabulous. I play in a rock fusion band and this amp and bass set up is all I need. My fingerstyle lines are warm and groovy and when I'm slapping and popping, my Streamer screams and bark like a beast. The sound is very articulate and effortless and even the lowest note of a B string will be clear and well defined. The most striking thing about it is the absolute absence of noise or hum even when trebles are cranking up. Just a warning, Ampeg junkies, this amp is not for you at all. You will only find Hi-Fi sound, clarity and purity here. SWR and Eden owners would sell their mothers for it !

Reliability ? : 10

Only have it for a month and a half so only time will tell but very solid construction and I remind you that all Glock. products are hand made.

Customer Support ? : 10

5 years warranty. Udo Klempt, Glockenklang creator, himself answers all my e-mail in the 24 hours. I live in France and Glock products were not distributed here so I had to trade by the web with the Beneluxe distributor. Edwin was really great, friendly and informative, always answering my mail in the day, faxing me quotes... great guy !

Overall Rating ? : 10

I was playing for a few years on a Marshall bass state combo but it was the time for me to change, my Warwick deserved a better amp. I first check SWR and Eden, also try Ashdown which is great too but basing myself on the growing reputation of Glockenklang I began to search comments on the web, in magazine... and in a few time, I became aware that it was the amp ! I will certainly add another Glock. speaker to that one, a 2x12 or another 4x10" one day but this one with its

36 hz/18 khz band width could stand alone in a 4 ohm version.
